Here's the "Inside" Story... Why CRAFTSMAN Sockets Give You More for Your Money!

25% Stronger. 25% Lighter. Thinner Walls.

All Straight Wall Sockets in 1/2" and 3/4"-inch Sizes are HOT FORGED.

Notice depth of regular socket as compared to forged socket... Hot less grabbing area, more chance to slip off hand.

Forged Sockets are stronger because metal grain follows socket contour, permits THINNER walls for light places.

Forged socket walls can be used to their full depth since space-wasting shoulders are eliminated.

Regular Socket
Regular socket walls MUST be thick to stand severe strain. Straight metal grain accounts for bulkier, heavier sockets.

Straight metal grain at points of greatest stress in ordinary sockets often results in costly, damaging breaks.

Despite their bulk, ordinary 1/2", 3/4", size sockets can not equal forged sockets for heavy load strain required of them.

Check these 8 important CRAFTSMAN Features

1. All parts are made of "Super-Tuff" steel, properly heat treated and tempered for strength and long life in hardest service.

2. All parts are plated, finished and machine polished for protection against rust. Tools you'll be proud to own.

3. Improved FORGED hex "T" handles with extra-strong roll pin rivet in drive lug. Handle has slight torque-like spring effect.

4. Ratchet wrenches with handle and head 1-piece FORGING. Stainless steel ratchet, pawl, pin, and reverse lever; reverses instantly.

5. Extra-large tension balls on extensions, etc. assure exceptionally solid locking of parts. Gives same service as a one-piece tool.

6-PT. SOCKETS are for use on hex nuts, and walls are much thicker. Teeth are more deeply broached for greater effect on nuts with corners rounded off.

8-PT. SOCKETS are used for square nuts only (generally found on farm machinery and equipment). Really a "must" for all farm mechanics.

12-PT. SOCKETS are for use on standard hex nuts and cap screws. They allow for a thinner wall section and give you double the positions when turning the nut.

CRAFTSMAN Differential Chain Hoist

Torrington needle bearings in lower sheaves

Tinken roller bearings in lower load hook

Superior “Anti-friction” construction enables one man to lift capacity loads and do it much faster, with less fatigue.

Actual laboratory tests prove that CRAFTSMAN hoists need less pull than ordinary hoists to lift the same load. Rib reinforced frame and yoke made of high tensile aluminum alloy—much stronger than regular heat treated yoke. Light in weight—easy to handle. Has Torrington anti-friction needle bearings in lower sheaves for easy lifting. Strong, non-sliping, electrically welded chain holds load at any point. Continuous slack chain on either side. Heavy drop forged steel swivel hooks are heat treated for long life.
